

TUNAP 13400 Valve Clean System

Special cleaning tool for valves and their surrounding ducts. Fast, material-conserving cleaning thanks to the special valve cleaning granulate MF933. With the neutralisation solution MF936, residual particles of the granulate are broken down and do not reach the combustion chamber.

Properties

- ✓ Effective cleaning thanks to the granulate, which matches the contamination
- ✓ Special grain size — ensures consistent product quality
- ✓ Special geometry — no wear or damage to the surface structure
- ✓ Simple and reliable application — residual particles of the granulate can be broken down with 936 neutralisation solution
- ✓ No hazardous materials
- ✓ No hazard labelling (hazard symbols, hazard text)

Application area

- ✓ Valve cleaning

Instructions

Refer to SI 933 before use.
